Industry served by application:
All

Corpidex v6

Graphical solution for move planning, space allocation and room reservations

Works with:

SQL Server[®] 2008 Standard

Technology areas:

- Microsoft[®].NET Framework
- Microsoft[®] Visual Studio[®]
- Microsoft[®] Office

SQL Server 2008

Launched in August 2008, Microsoft[®] SQL Server[®] 2008 has generated overwhelming customer and partner excitement. With over 1.5 million downloads to-date, more than 2,500 partners use this platform to deliver their solutions.

Regarded as a critical component of Microsoft's acclaimed business intelligence platform, SQL Server 2008 has received industry recognition and is now considered the fastest-growing relational database in the world.

Maximize the value of your corporate real estate with a consolidated view of all your space

Acquiring and managing corporate real estate is not only expensive, it's also time-consuming. Relevant information is often stored in multiple places and formats; sometimes it's not even written down, meaning you must rely on the memories of a few knowledgeable individuals. As a result, it's difficult to obtain the clear, real-time overview of space availability and utilization required to accurately manage office space and plan for moves. For a growing organization, this could impact productivity and operational efficiency – potentially hindering future growth and performance.

"SQL Server 2008 is an enterprise-strength, robust database engine that has the toolset we need to create data integration with large ERP solutions, but is still nimble and scalable for the smaller, more humble project. The flexibility to support both large and small clients means we only have to build on one platform."

—Annette Wilde, Director, Planimetron Inc.

Planimetron Inc.'s innovative Corpidex software enables you to manage your corporate real estate quickly and efficiently. Taking advantage of SQL Server 2008's powerful data management capabilities, Corpidex is a highly effective tool that integrates with HR and financial systems, as well as Microsoft Office applications, to provide a visually appealing, consolidated view of all your space.

With instant access to up-to-date data, you can rapidly identify trends and opportunities, recognize potential risks, and accelerate the decision-making process. What's more, you can simplify corporate space allocation, move people to the right locations, and keep associated teams close together to promote productivity and cooperation. And by managing your existing real estate more effectively now, you'll be able to focus on your core business activities and future expansion.

"Microsoft remains committed to the success of our broad ISV partner community who drive innovative solutions to market," said Claude Lorenson, Ph.D., Director in the Enterprise Application Platform marketing team at Microsoft. "SQL Server 2008 is revolutionizing database development with enhancements such as relational database support and consistent query syntax across programming languages. SQL Server 2008 combined with powerful ISV partner solutions, enables developers to access and manipulate business-critical data from a variety of diverse devices, platforms and data services across the enterprise."
